

Obstacle Avoiding Arduino Car:

A car which can avoid obstacle automatically

Dev: Michalis Vasilakis // Date: 11/12/2015 // www.ardumotive.com

Use and modify by Kuei-Chin Huang // Date: 12/12/2018

Components	Come from...
Arduino Board	321 Maker Kit
Mini breadboard	Maker space
L298 motor driver module	banggood.com
2x dc motors with wheels	banggood.com
HC-SR04 ultrasonic sensor	banggood.com
Micro servo motor	321 Maker Kit
A Button , a LED, a buzzer	Maker space
220 Ohm resistor	Maker space
Battery holder and battery	banggood.com
Car chassis	<u>Thingiverse</u> , Maker space

Future Expansion

Network
Control App

Cleaner

Arduino Leonardo

Mini
Breadboard

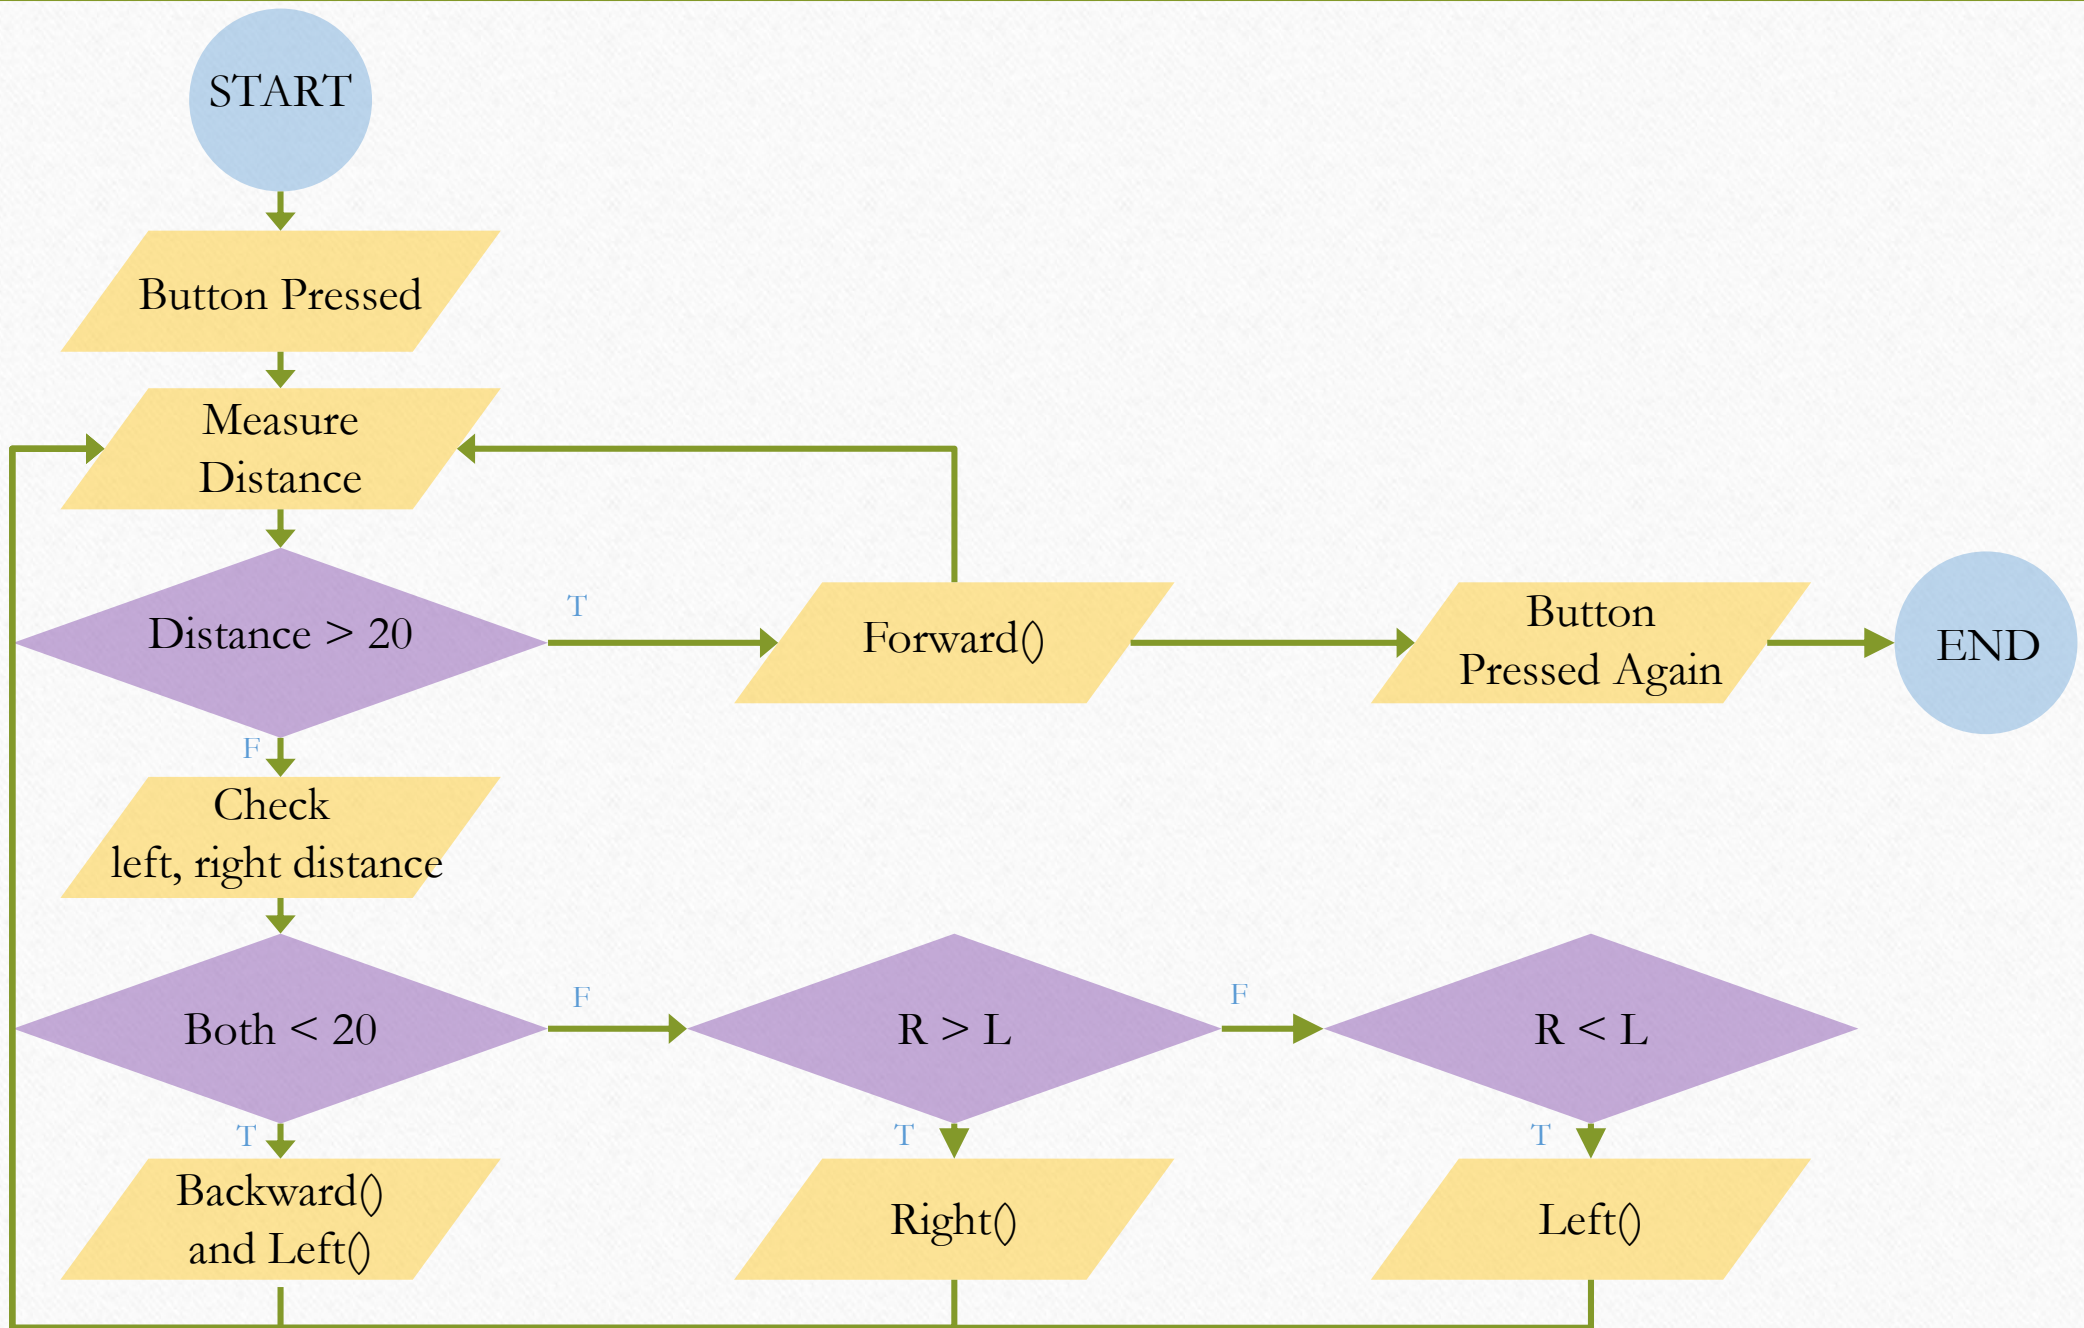

LED

Buzzer

L298 Motor
Driver
Module

Motor with
Wheel

Desired goals steps taken

1. Test

- sensor, motor, servo

2. Assemble

- Issue: the speed of two motor is different

3. Programming

- Issue: Library

Problems Overcame - Library

- Error 1
 - Error message: don't have a class (ranging) in installed library (ultrasonic.h).
 - Find out the reason: the library I installed from the list in IDE either outdated or we might get the wrong one. Gabriel swe said: "I would say it is quite rare a library is released with the same name as an already existing name, but in this case it exists."
 - Take action: Install the new, correct library from the place that ITead offered.
- Error 2
 - Error message: already have the same library(, so I can't import the new one.)
 - Find out the way: stackoverflow said I have to remove the whole library file from the computer.
 - Take action: No Grabbing said, "Your Arduino library folder should look like this: My Documents\Arduino\libraries\ArduinoParty\."
- Error 3
 - Error message: "WProgram.h: No such file or directory."
 - Find out the reason: HazardsMind said, "You have to go into the .h and .cpp files and change "WProgram.h" to "Arduino.h."

Problems Overcame - Motor

- Issue:
the car went in circle repeatedly

- Take action:
modify the code.

`digitalWrite(motor, HIGH)`
`digitalWrite(motor, LOW)`

`analogWrite(motor,255)`
`analogWrite(motor,0)`

HOW TO CHANGE THE SPEED OF A DC MOTOR WITH THE ARDUINO

- Problem Overcame 1: Enough power (for sensor)
- Problem Overcame 2: Change all functions together,
including `forward()`, `backward()`, `left()`, `right()`...

Future Expansions: Automotive Cleaner

THANK
YOU

The image features a central white circle containing the text "THANK YOU" in a thin, black, sans-serif font. The circle is set against a background of overlapping, textured geometric shapes in various colors including yellow, orange, red, purple, and teal. This central graphic is framed by a light beige border with a horizontal black line passing through its center.
